

KWANDA SIMISO HLATSHWAYO

AI DEVELOPER · SOFTWARE ENGINEER AUTOMATION ENGINEER

ThekidSmiso

Building intelligent software, autonomous AI agents, and AI-powered automation systems.

EDUCATION

Diploma in Computer Science

Tshwane University of Technology
eMalahleni Campus
2024 – Expected 2026
Earned distinctions across multiple computing and mathematics subjects.

National Senior Certificate

Phulong Secondary School
Completed 2022

TECHNICAL SKILLS

AI & AUTOMATION

LangGraph · LangChain · Gemini API
OpenAI API · n8n · ReAct Agent Design
Prompt Engineering

PROGRAMMING

Python · Java · JavaScript (ES6+) · Kotlin
SQL / PL-SQL

BACKEND

Node.js · Express.js · React · REST APIs
HTML5 / CSS3

MOBILE

Android · Jetpack Compose · ViewModel
StateFlow

DATABASES

MySQL · Oracle SQL · PL/SQL
Database Design

DEVOPS

Git · GitHub Actions · Linux · Railway
Agile / SDLC

ABOUT ME

AI-focused software engineer with proven experience designing, building, and shipping autonomous intelligent systems end-to-end. Architects and deploys AI agents powered by LangGraph ReAct loops, orchestrates multi-step LLM workflows with LangChain, and integrates Gemini and OpenAI models into backend applications that run in production — not just locally. Proficient across the full stack from REST API design and Express.js server engineering to cloud deployment on Railway, n8n automation pipelines, and Android mobile development. Combines a rigorous Diploma in Computer Science foundation — covering algorithms, OOP, database design, networking, and software engineering — with relentless self-directed depth in AI orchestration and automation. Builds every project to a production standard: maintainable, deployable, and engineered to solve real problems for real users.

FEATURED PROJECTS

AI Patent Intelligence Agent

Python · LangGraph · LangChain · Gemini 2.5 Flash · ReAct · feedparser

github.com/ThekidSmiso/-ai-patent-agent

Autonomous intelligence platform engineered to continuously monitor live Google News feeds across six technology sectors — identifying patent and trademark opportunities before they become industry knowledge. The agent is built on a LangGraph ReAct loop, giving it structured multi-step reasoning: it searches, analyses, scores relevance, and detects trend changes across sessions using persistent memory. When significant score shifts are detected, the system raises targeted alerts. Every run produces timestamped intelligence reports, turning a labour-intensive research task into a fully automated strategic signal feed.

AI Calendar Agent

n8n · OpenAI GPT-4o · Google Calendar API

github.com/ThekidSmiso/AI-Calendar-Update

Conversational AI assistant that eliminates manual calendar entry by translating natural-language instructions directly into structured Google Calendar events via a fully automated n8n workflow. The agent handles the full spectrum of scheduling nuance: relative date expressions such as "next Tuesday morning", timezone-aware event creation, ambiguous phrasing, and multi-event inputs — all resolved through GPT-4o language parsing before the Calendar API is called. Users describe their schedule in plain English; the system handles everything else.

CORE COMPETENCIES

Autonomous AI Agent Design · LLM Orchestration & Fine-tuning · Prompt Engineering · REST API Architecture · Cloud Deployment · Backend Engineering (Node.js / Express) · Android Mobile Development · Relational Database Design · Data Structures & Algorithms · Object-Oriented Design Patterns · Workflow Automation · Information Security Fundamentals
